DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Adding all DOM elements with specific data attribute values together than having them coded separate through out my script file

_____

2. What parts of encapsulating your logic were hard?

None, rather than understanding and practicing.
I take hard as a good practise

_____

3. Is abstracting the book preview a good or bad idea? Why?

Yes very good indeed as it compiles my code in a neat manner and better to understand for the next coder to read or they would want to update anything and error would pop up if they incorrect add number in the type of string

_____
